

CIS VPN Global Protect

1. In a browser search bar enter the following address to be directed to the Global Protect VPN download Portal

<https://cisgvpn.highline.edu/global-protect/login.esp>

2. Once you navigate to this page you will be prompted for your highline credentials

Enter your Username and Password in the fields shown below

A screenshot of the GlobalProtect Portal login form. At the top left is the Palo Alto Networks logo. The title 'GlobalProtect Portal' is centered. Below the title are two input fields: 'Name' with the text 'highline Username' and 'Password' with a masked password '*****'. Both input fields are highlighted with red rectangular boxes. A 'Login' button is positioned below the password field.

3. Once you are logged in you will be prompted to download the relevant Global Protect version for your specific operating system

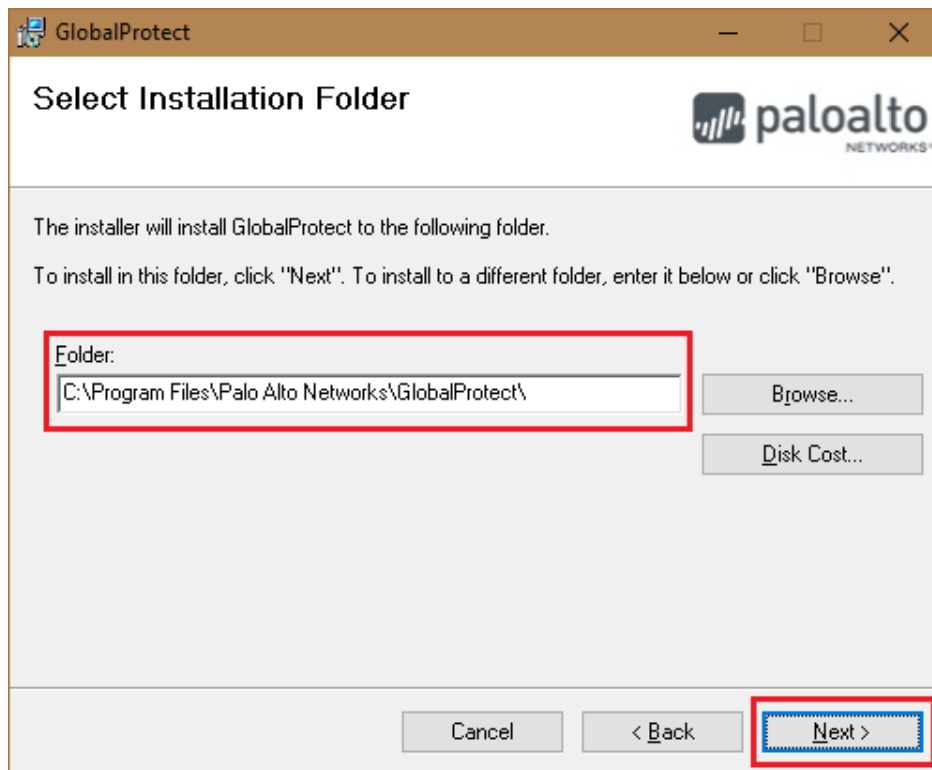

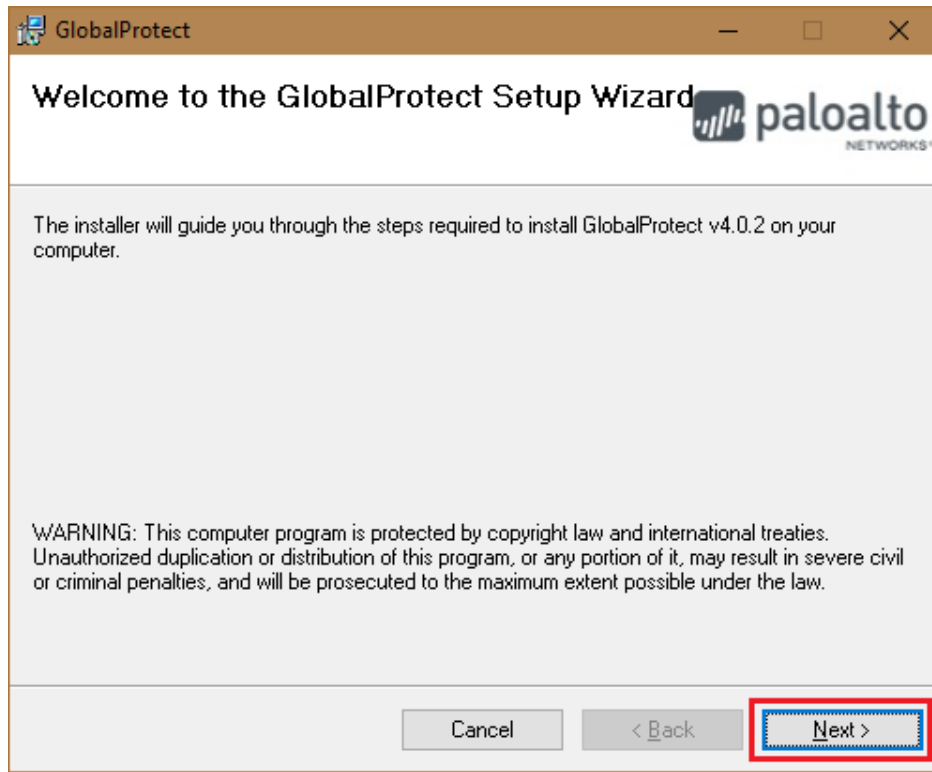

Select the download for your operating system

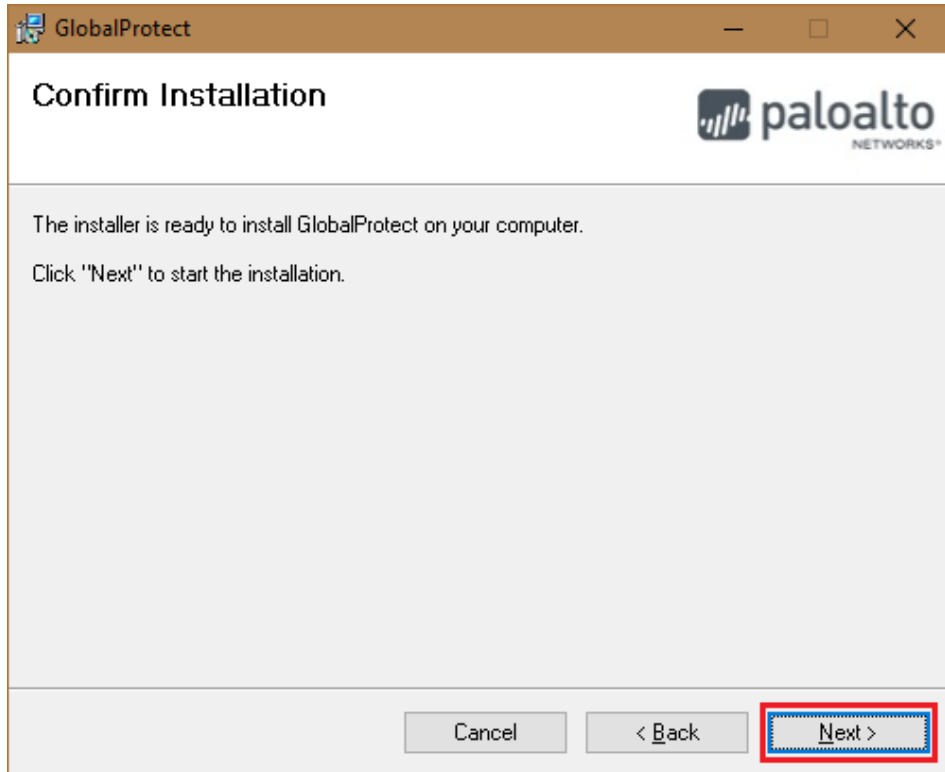

4. Once you select your download, you should see it download or you will be prompted to save it. Once it is downloaded and saved, run the application.

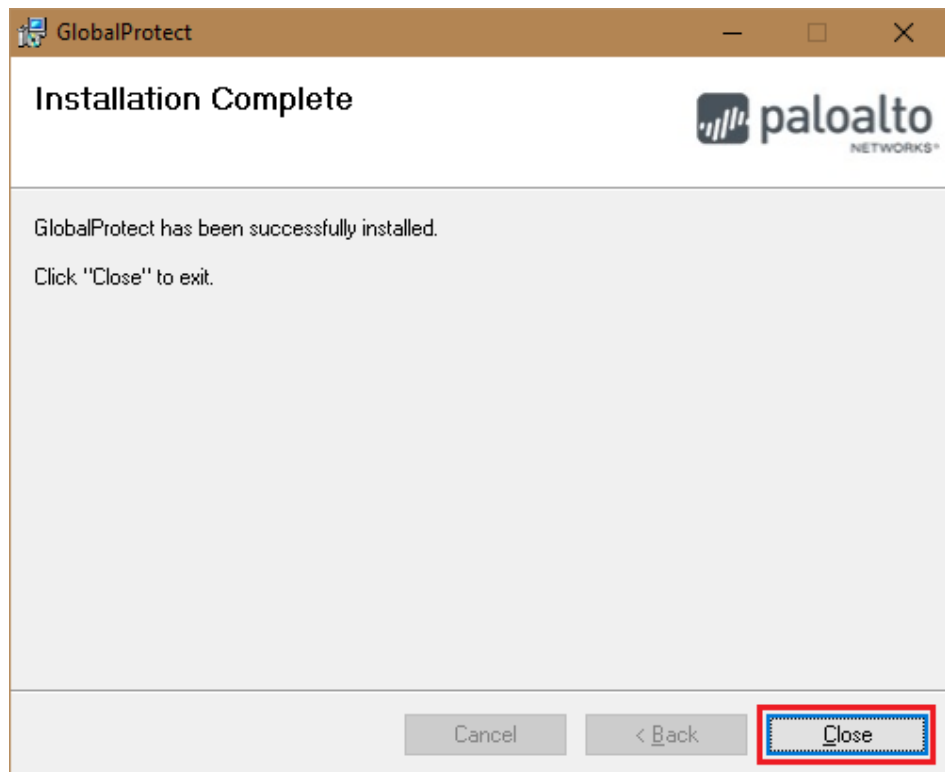

5. After running the application, you will be prompted to go through the installation process. Follow all the steps to complete the installation and install Global Protect to your PC.

Select the location where you would like to install the application and press "Next"

Press "Next" to confirm the installation of the application

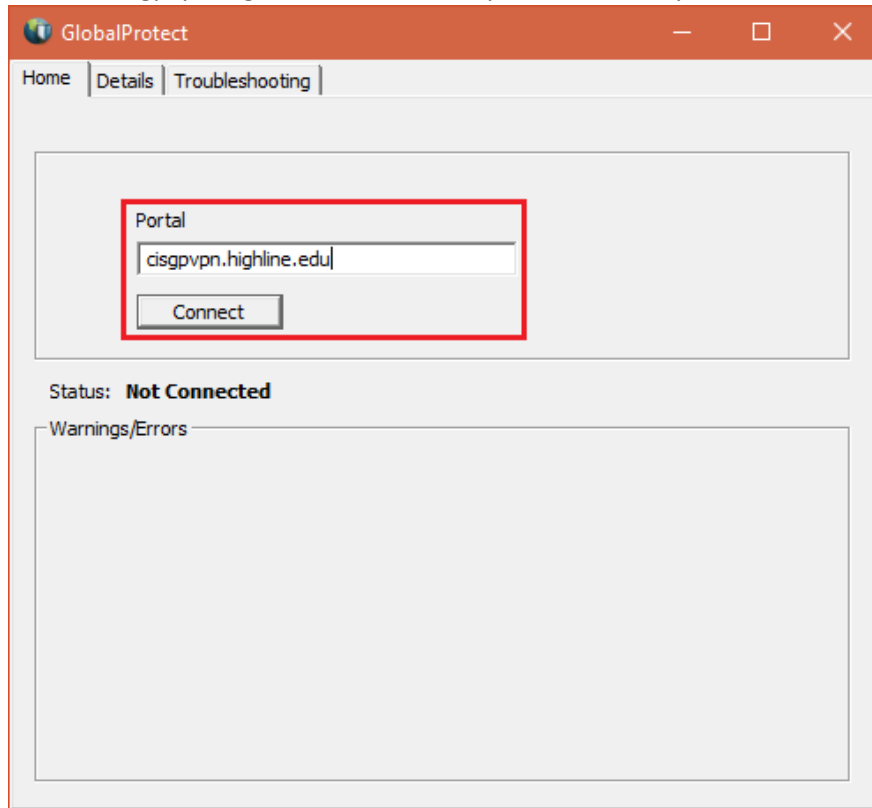

Once the installation is complete press "Close" to close the dialog box

6. Once the installation is complete navigate to the application now installed on the computer

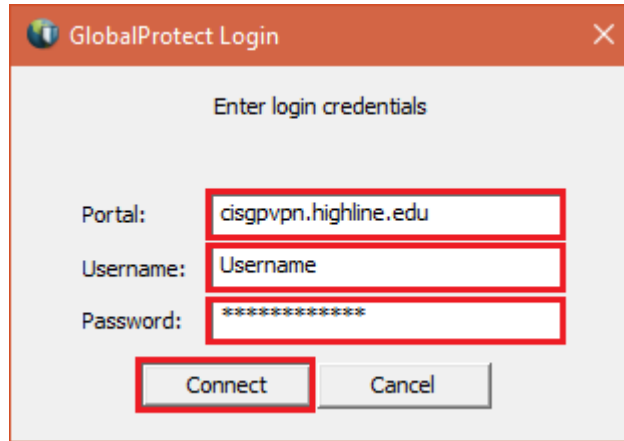

7. Once you launch the application it will run and prompt you for the VPN Server Portal and Login credentials.

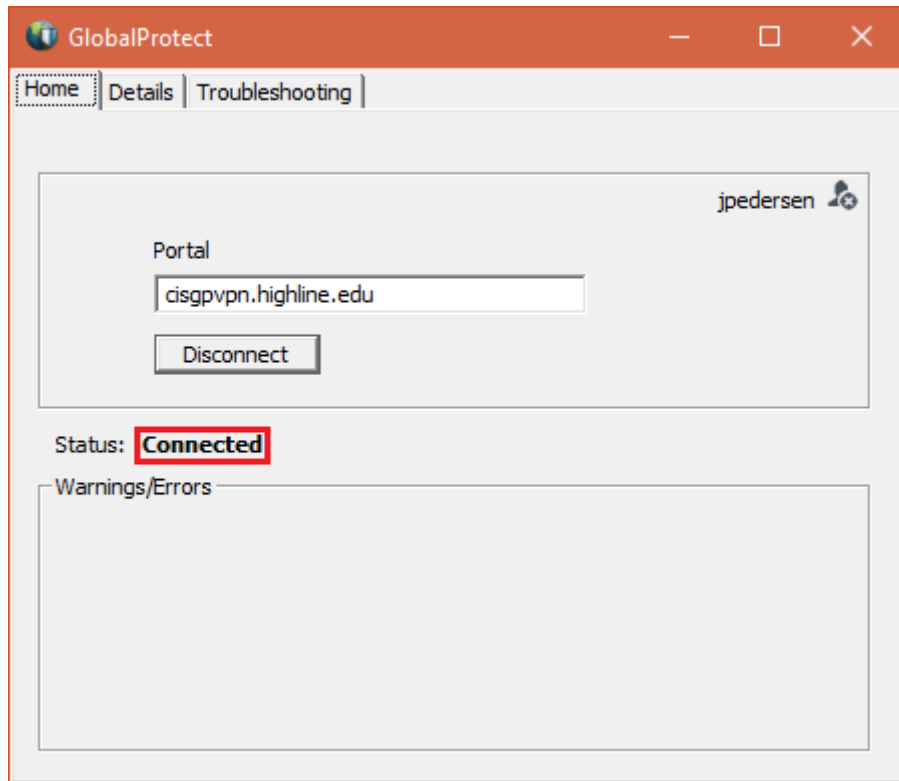

Enter "cisgpvpn.highline.edu" into the portal field and press "Connect"

Once you press connect you will be prompted for your Highline Username and Password. Enter your credentials and press “Connect”

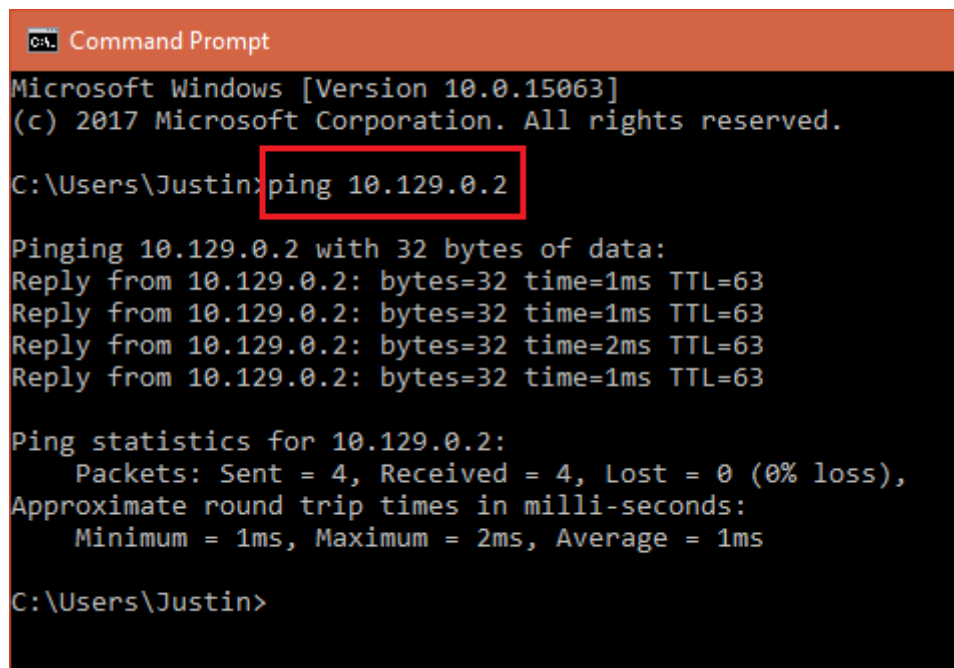

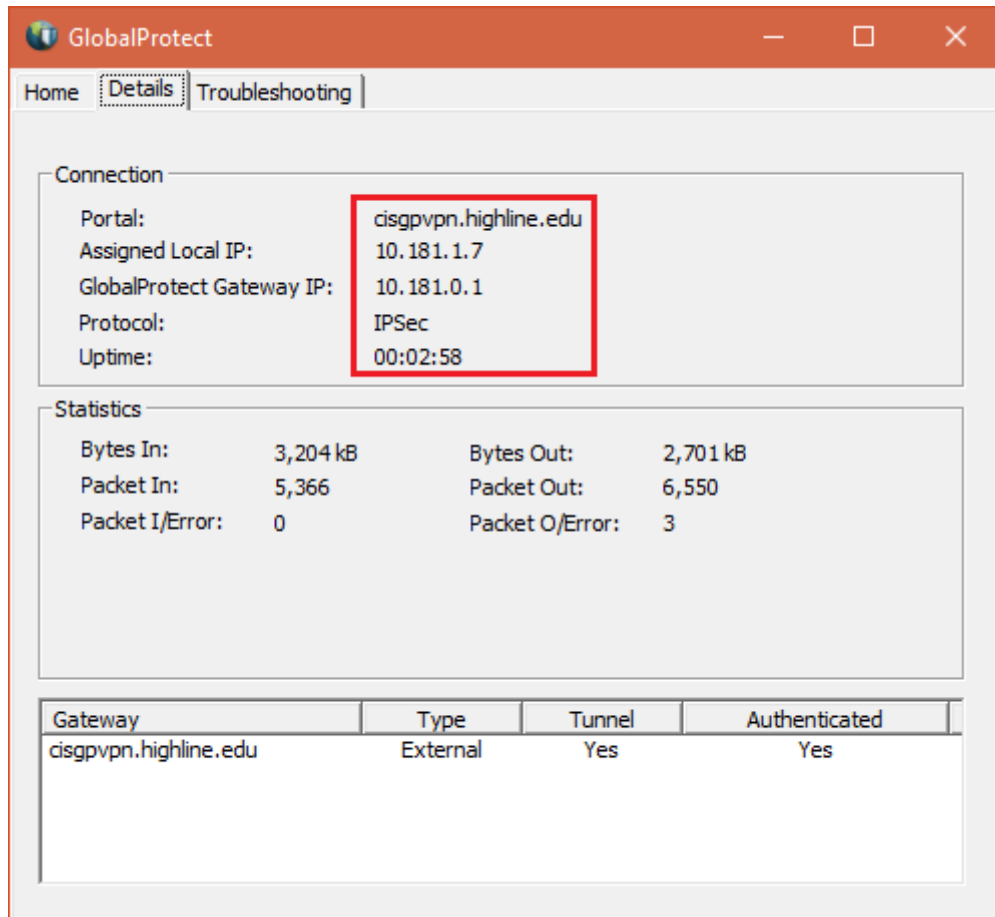

8. Once you are connected you should notice that the application shows a connected state

If it does not show you are connected, recheck the portal address and your login credentials to verify all fields have been entered correctly

9. You can test your connection by selecting “Details” and checking the connection address. You can also verify you are connected to the CIS network by Pinging the CIS DNS server.

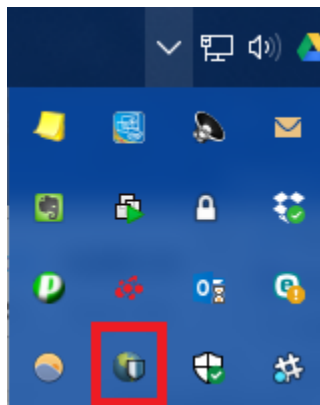

10. You will now notice the following icon in you task bar if you are on windows

The icon will look like this when it is in a disconnect state

The icon will look like this when it is in a connected state

Ensure that you are not connected the CISVPN when you are not using it is. The application will remain running when not in use. If you wish to close the application you must do so by shutting down the process in task manager
